Assignment Day 9

2. Box Padding :

→ Padding is a Content space between the content and the border of an element

→ Padding adds space inside the box around the content

3. Border :

→ Border is the line surrounds the Padding and content of a HTML element

→ It helps seperate the element from other elements and make the box visible

4. Margin :

→ Margin is the space outside the border of an HTML element.

→ It helps to keep elements seperate from each other

5. Cascading:

→ Cascading in CSS means how the browser decides which CSS styles to apply when multiple styles are applied to the same element.

6. Specifity

→ Specifity is the priority level of selectors used to ~~app~~ decide which style will be applied to an element when multiple rules target it

7. Order.

→ Order rule in CSS means that when two selectors have the same specifity, the rule that appears last in the CSS will be applied.

8 Important:

→ Important rule in CSS uses !important to give a style maximum priority overriding other CSS rules.
