Task 2

1. what is scope

-) The area of Program where a variable can be used or accessed.

=) Global scope

=) Block scope

=) Function scope

2. what is initialization ?

-) Giving a variable its first value

3. what is declaration ?

-) ~~Assigning~~ or creating a variable and give a name for it.

4. what is re declaration ?

-) Declaring same variable with same name in same scope

-) Allowed only in <u>var</u>

5. Reassign :

-> ~~giving~~

-> Changing the value of a variable after it has been initialized

6. Hoisting :

-> JS moves variables and function declaration to the top of their scope before the code runs.

-> variable and function processed before execution
